**First Office Action on the Merits**

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

- u) 2. Claim 21 is rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for the process disclosed by the present specification, does not reasonably provide enablement for the utilization of any compound containing a precursor for the desire 17-position side chain in one or more stages with one or more reactants serving to form the desire 17-position side chain. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to use the invention commensurate in scope with these claims.

The factors to be considered in determining whether a disclosure meets the enablement requirement of 35 USC 112, first paragraph, have been described in *In re Wands*, 8 USPQ2d 1400 (Fed. Cir. 1988). Among these factors are (1) the nature of the invention, (2) the breadth of the claims, (3) the state of the prior art, (4) the predictability or unpredictability of the art, (5) the amount of guidance or direction presented, (6) the presence or absence of working examples, (7) the relative skill in the art and (8) the quantity of experimentation necessary. When the above factors are taken into

consideration, the examiner's position is that one skilled in the art could not perform the invention commensurate in scope with the instant claim without undue experimentation.

The instant claim encompasses reacting any compound containing a precursor for the desired side chain with any reactant(s). The present specification discloses specific chemical processes for the production of compounds of formula I as defined by the instant invention. Apart from the specific reactions disclosed by the present specification, the skilled artisan would be unable to determine combination of other reactants that might be useful in the production of the claimed compounds because the art is unpredictable. Because of the unpredictability of the chemical art as it relates to chemical processes, the skilled artisan would be burdened with undue experimentation in order to determine all the reactants (i.e., compounds containing a precursor for the desired 17-position side chain in one or more stages etc.) necessary to produce the claimed compounds commensurate in scope with the instant claim. It is suggested that the disclosed processes be recited by the instant claim.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1616

4. Claims 1-5, ~~8~~<sup>7</sup>-13, 17 and 19 are rejected under 35 U.S.C. 102(b) as being anticipated by Dolence et al.

Dolence et al. teach the compound 3-methoxy-19-norcholesta-1,3,5(10)-triene-22,25-diol (see attached Abstract). The compound taught by the reference is encompassed by the instant claims.

***Allowable Subject Matter***

5. Claims 6, 14-16 and 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Telephone Inquiry***

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Barbara P. Badio, Ph.D. whose telephone number is 703-308-4595. The examiner can normally be reached on M-F from 7:30am-4pm.
